

# Mobile application for diagnostics and setup of SIGNAL and SMART trackers

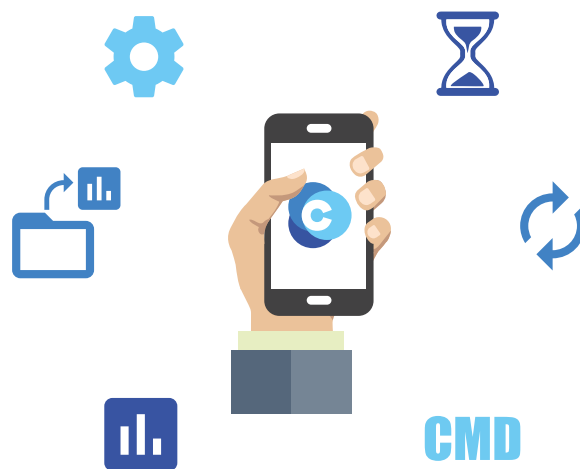

## NTC Control

With the help of the **NTC Control** mobile application it is much easier to carry out diagnostics and basic configuration of **SIGNAL** and **SMART** GLONASS-trackers in any conditions.

After installation of the **NTC Control** mobile application on OC Android-based smartphone or tablet, you will be able to connect to devices and work with them in the immediate area or at a considerable distance from them.

### How it is possible to connect to the tracker?

- via USB-interface;
- via Bluetooth;
- via the Internet (with the help of the RCS-service).

### Application features

- display the current telemetry;
- unloading TMI-file from the device (black box data);
- setup of basic set of parameters for object monitoring;
- time synchronization;
- device firmware update;
- sending of standart and user commands to the device.

**NTC CONTROL - IS YOUR INDISPENSABLE ASSISTANT!**

# SIGNAL and SMART trackers remote control system

## Device Remote Control

**DRC** system is designed for remote control of **SIGNAL S-26xx**, and **SMART S-24xx** GLONASS-trackers. It is cloud service with the help of which it is possible to update configuration and firmware and also to perform sending of commands by multiple devices simultaneously.

In a personal account of the **DRC** you can create a task to update configuration, firmware or task to execute commands. The system will perform your task in a specified period, as soon as tracker connects to it.

### Control multiple trackers with a few clicks

- configuration loading;
- firmware update;
- automatic firmware update;
- sending of standard and user commands to the device.

### Supported trackers

The system supports only SIGNAL S-26xx and SMART S-24xx equipment.

## **DRC - EFFECTIVE OPERATION WITH TRACKERS!**
